

Bogdan Mijalkovic

Senior Full Stack / AI Developer

bog.mijal@gmail.com | +381 637607693 | Obrenovac, Serbia | linkedin.com/in/bogdan-mijax

SUMMARY

Full-stack software engineer with 8 years building high-traffic systems that stay reliable under heavy concurrent load. I work across the stack - React on the front end; Node.js, Python (Django, Flask), APIs, and microservices on the back. My favorite work sits where AI meets real products: shipping LLM integrations, intelligent automation, and recommendation and data-processing pipelines that actually scale in production, not demos stuck in a notebook. I turn messy, large-scale data into fast, usable, well-designed experiences, from SaaS dashboards to D3 visualizations that make decisions obvious. I care about clean architecture, readable code, and solving the real problem over the impressive-looking one.

SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React/Next.js, D3.js

Backend : Node.js, Express.js, Python, Django, Flask, GraphQL, Apollo, Ruby on Rails

AI & Machine Learning: OpenAI APIs, LLM Integration, Prompt Engineering, RAG Concepts, Chatbots, Semantic Search, AI Automation

Databases: Oracle, DB2, PostgreSQL, MySQL, MongoDB

Cloud & DevOps: Docker, Azure DevOps, CI/CD, Jenkins, Git

Methodologies: Agile, Scrum, Test-Driven Development (TDD), Clean Architecture

EXPERIENCE

Senior Full Stack Developer

PEPSICO · Contract

Obrenovac, Serbia (Remote)

Jan 2023 – Mar 2026

- Built a web-based food & beverage experiments simulator with automated report generation, including data extraction and graph visualizations.
- Integrated AI/ML features to predict experiment outcomes and recommend optimal flavor and formulation combinations.
- Optimized data-processing methods and AI-driven pipelines to improve simulation performance and report accuracy.
- Led tech stack modernization from Python/Dash to a Flask + React/JavaScript architecture for better scalability.
- Migrated the application to Azure and integrated SSO for stronger security and access control.
- Implemented CI/CD pipelines and delivered professional PDF/JPG report exports with cross-functional R&D teams.

Frontend / Visualization Engineer

LENNAR INC · Contract

Obrenovac, Serbia (Remote)

Jan 2020 – Dec 2022

- Developed responsive dashboards supporting large-scale screen resolutions.
- Implemented advanced data visualizations using D3.js.
- Built Node.js proxy services to integrate with Snowflake data platforms.
- Improved UI performance and rendering efficiency.
- Worked with data-driven features to enhance decision-making tools.

Frontend Developer

HTEC · Full-time

Obrenovac, Serbia

Jan 2018 – Dec 2019

- Developed responsive UI using HTML, CSS, and JavaScript.
- Implemented dynamic UI features based on data-driven logic.
- Assisted in integrating backend services and APIs.
- Supported early-stage AI-driven features such as search optimization and filtering logic.

EDUCATION

University of Belgrade

2013–2017

Belgrade, Serbia

- Bachelor's degree in Computer Engineering
- Full Academic Scholarship
- GPA: 3.9/4.0
